

Project II- Employee Attrition Prediction

The purpose of this analysis was to understand why employees leave the company and identify areas where HR can improve employee retention. Overall, 16% of employees left the company, while 84% remained, indicating that although most employees stay, there are clear patterns among those who leave.

The analysis shows that employee attrition is influenced by several workplace factors rather than salary alone. Employees working in the Sales department, especially Sales Representatives, are more likely to leave. Frequent overtime, poor work-life balance, and employees in their first few years with the company also show a higher likelihood of leaving.

Based on these findings, HR should focus on improving work-life balance, reducing excessive overtime, and supporting employees early in their careers through regular check-ins, mentoring, and career development opportunities. These initiatives can help improve employee satisfaction, reduce turnover, and lower recruitment costs.

Key Findings

- Around 16% of employees left, while 84% stayed with the company.
- The Sales department had the highest employee turnover.
- Sales Representatives showed the highest attrition among all job roles.
- Employees who left generally earned lower salaries, but salary alone was not the main reason for attrition.
- Employees who worked frequent overtime, had poor work-life balance, or were in their first few years at the company were more likely to leave.
- Focusing on employee well-being, career growth, and retention programs in high-risk departments can help reduce employee turnover.
